I perioden fra den 7. februar til den 11. februar 2011 afholder mineselskabet True North Gems en række møder og workshoppe i forbindelse med den projekterede rubin projekt, Aappaluttoq ved Qeqertarsuatsiaat. Første møde er et møde for interessenter og informanter.

True North Gems inviterer hermed til møde for interessenter og informanter mandag den 7.februar kl. 13:00 på Hotel Hans Egede om rubin projektet.

Mødet har fokus på den igangværende undersøgelse af de sociale og socio-økonomiske forhold.

Tilmelding til mødet: send en e-mail til tne@gmcb.dk

I løbet af workshoppen vil forskellige emner der er relevante i forhold til de social og socio-økonomiske påvirkninger blive diskuteret og der bliver mulighed for at kommentere på forslag til disse planlagte undersøgelser.

Mindre møder fra den 9. til den 11. februar

I perioden fra den 9. til den 11. februar afholdes en række mindre møder med udvalgte fokusgrupper og udvalgte personer, som har kendskab til forhold af relevans for de sociale og socio-økonomiske påvirkninger. Separate invitationer vil blive sendt til de involverede personer i de mindre møder.

Formålet med disse mindre møder er, at indsamle information til brug for udarbejdelsen af de eksisterende sociale og socio-økonomiske forhold inden projekt start (baseline). Denne baseline eller baggrundsforhold danner basis for en efterfølgende monitoring og evaluering af de reelle påvirkninger ved mineprojektet.

Vi ser frem til at præsentere projektet for jer og indsamle informationer.

Grontmij | Carl Bro er udpeget til at assistere True North Gems i undersøgelsen af de sociale og socio-økonomiske påvirkninger.

På vegne af True North Gems

Grontmij | Carl Bro

Med venlig hilsen

Ana Gabriela Factor og Tanja Nielsen

Minutes of Meeting/ Workshop

Projekt: 30.5403.99

Date/time : 07. februar 2011

Place : Nuuk

Workshop agenda

1. Presentation of True North Gems and the Aappaluttoq project by Nicholas Houghton and Jeff Giesbrecht. (Translation by Hans Pavia Rosing)
2. SIA by Tanja Nielsen and Ana Gabriela Factor
3. Presentation of results from workshop posters

Q marks an asked question and A the answer. Due to limited time it was not possible to learn all names and therefore the questions asked are anonymous.

4.1 Presentation by TNG

Presentation of True North Gems and the Aappaluttoq project by Nicholas Houghton and Jeff Giesbrecht. (Translation by Hans Pavia Rosing).

Questions asked:

1	Q: What is the size of the mine? A: 200m wide, 200m long 250m deep, but the mining will be about 70meter deep.
2	Q: Is it underground mining? A: No, it is an open pit.
3	Q: What will happen to the landscape? A: (Picture in power point is shown) the pit will be refilled with water and no or very little sign of mining will be visible.
4	Q: About ships, how often will there be transport to Nuuk? A: We don't at this time, transportation will be complicated, and security needs to be in place, it is expected that the transport will happen once a week.
5	Q: Kalaallinik sulisoqassava tassani (ved sorteringen i Nuuk) A: I have a slide to show employment, we plan to employ Greenlanders, except for a few specialized occupations. For sorting work, there will be occupation all year round, full time.
6	Q: What about subcontractors? A: We will probably use local subcontractors, we expect the company MT Højgaard will be subcontractors and other like in catering etc.
7	Q: Is there a special reason why you are subcontracting with MT Højgaard? A: No special reason, we use local company connected to Greenland
8	Q: Have you asked Greenlanders in the mining? A: Not yet.
9	Q: Are you doing the education, and will they go to Canada? A: We will arrange for training – but we are not clear on details yet.
10	Q: Season workers, what are they going to do in winters? A: We will ask them, what they think.
11	Q: What will the operation time for the mine be? A: About 7 years, but the market will show how well the selling is going, we are hoping longer.
12	Q: Will there be a bid for local company? A: Yes there will.
13	Q: 800 square km, will they release some of their concession area after they have found rubies? (slipper de noget af deres koncessions areal siden de har fundet rubiner?) A: As we progress, as we market we will understand the requirement, we need to do more work, so more exploration work will be done, it is possible to keep the area further more.
14	Q: What are the exact boundaries? A: Look at BMP website.
15	Q: Courses-education, why is it not done long time ago? A: We did explorational work for feasibility study, we know there is very good and skilled artisanal.

4.2 Part 2

SIA by Tanja Nielsen and Ana Gabriela Factor

Statements (S) made and questions asked (Q) and answered (A) during the presentation of SIA:

1	S: There are consequences if SIA is not complied with.
2	S: There are 2 demands in the SIA process; one is IBA where a monitoring and evaluation is made.
3	Q: What will happen when the workforce in mining and oiling is used up? A:
4	Q: Are there consequences for not complying with the agreement? A:
5	Q: Has experience from other countries been used? A: Yes, that is why we have been chosen to do the SIA; we especially have experience with small scale mining.
6	S: It is very important that locals are educated to do the work, so that hiring of Thai's will be avoided.
7	Q: Are you doing a similar workshop in Qeqertarsuatsiaat? A: No, that will be different.
8	Q: You will probably have tons of questions, as people have been coming in and out the last 50 years.

4.3 Result of group exercises

(See full table in the next page)

Topic	Key scoping questions proposed by the SIA consultants	Inputs from groups work
Employment and Training	<ul style="list-style-type: none"> ▪ From where and How should TNG recruit workforce to the mining project? ▪ Are working models and conditions acceptable for local workers? ▪ Pre-employment requirements ▪ Will it be possible to recruit the high percentage of local workforce that TNG wish to? ▪ How can the project better contribute to develop the capacity and knowledge within gemmology and mining of gemstones in Greenland? 	<ul style="list-style-type: none"> • What is the best way for TNG to participate in educating local workforce? • Which type of education/courses should be offered in Qeqertarsuatsiaat and in Nuuk? • Could means be allocated for local educations (stones, geology in public schools etc.) • Are there qualified instructors or teachers?
Social Aspects	<ul style="list-style-type: none"> • Is the project acceptable for the local people in Qeqertarsuatsiaat? • Which aspects can be problematic from the local community perspective? • It could be expected that people that left Qeqertarsuatsiaat could come back because of the possibilities of the project. Which are the possible consequences? • Could families' production systems and life style be affected if one family member works at the mine? • Is the project in conflict with fishing, hunting or other productive and recreational activities? How? Can the conflict be avoided? • How should TNG and the local people communicate and work together in the future if the project starts? • Health: Which health indicators are important to monitor? • Conflict with August 16: Understand the conflict, lessons learned, how to move forward. 	<ul style="list-style-type: none"> • Is it a real problem for the inhabitants if their areas for hunting are reduced? • What are social consequences of season-hiring? • What can the season-workers do in the wintertime? • Can miners keep a fulltime hunting license? (Fangerbevis)
Business life	<ul style="list-style-type: none"> • Which are the direct business possibilities created by the project? 	<p>Note: This group responded the questions</p> <ul style="list-style-type: none"> • Knowledge transfer/know-how from the project (Viden overførsel know how <i>(fra projektet)</i>. Spørgsmål tilføjes

	<ul style="list-style-type: none"> • How will the contracts be? • Are there possibilities for synergy with other economic activities, like tourism, polishing of stones, jewellery design and manufacturing, other mining activities? • Branding of Greenlandic rubies: who benefits from it and how the impacts will be measured? • Where is optimal and where is problematic to place TNG sorting facility? 	<p>(afledte arbejder).)</p> <ul style="list-style-type: none"> • Outsourcing is controlled by the size of construction works (locally, from outside) Attention to price, delivery-price. Local workforce (apprentices) (What are the possibilities that foreign expertise is cheaper than local?) (Udlisering bliver styret af anlægsstørrelsen. (<i>Lokalt, udefra</i>) (Husk råstoflovens paragraf). Være opmærksom på pris, på leveranceprisen. Lokalarbejdskraft (lærlinge) (<i>Hvilke muligheder for at konkurrence fra udlandsk billigere i forhold til lokale leverandører</i>)) • The effect of synergy depends on the actors willing and the wish of a closer cooperation with local stonecutters and designers (Greenlandic trademark). The actors willing to exclude own people will be significant in relation to other mining activities. (Is there a possibility of tourism related to the project? Cooperation between TNG and local actors. Obstacles?). Branding will be good for the country and companies because of the name "Greenland". (Synergieffekt er afhængig af aktørens velvilje og ønske om tættere samarbejde med lokale stenslibere og designere. (<i>Grønlandsk varemærke</i>) Aktørs vilje til at udelukke egne folk vil have betydning i forhold til andre mine aktiviteter. (<i>Er der muligheder for turisme til projektet? Samarbejde mellem TNG og lokale aktører. Eller forhindringer.</i>)) • Companies <u>must</u> register in Greenland to make use of the "Brand of Greenland" (Branding vil gavne landet og selskaber på grund af navnet "Grønland". Selskaber <u>skal</u> registreres i Grønland for at udnytte Brand af Grønland.) • A good location for the sorting could be in Qeqertarsuatsiaat or in Paamiut which will ensure that Qeqertarsuatsiaat and Paamiut are not absorbed by the ISUA project (Sorteringshus kunne placeres med fordel i Qeqertarsuatsiaat eller Paamiut sikrer at det ikke drukner med "Isua" projekt.)
Other remarks		

Demand for electricity production: “Grøn Energi” in TNG must have a closer cooperation with the “råstofskolen” from the beginning. (Krav til strømproduktion Grøn Energi i TNG skal have tættere samarbejde med råstofskolen fra starten.)

All question regarding problems related to tax, health care services, elections etc. must be dealt with in general. (Alle spørgsmål vedrørende problemer omkring skat, sundhedsvæsen, valgret m. m. skal afklares overordnet.)

SIK has sent a (training?) project to the government, elaborated in cooperation with schools in Germany and Russia

Education on mining industry should be all along the whole schooling system

Demands for allowing to train/educate local young people

The know how they bring, what can the give us?

EU is too expensive, what about the rest of the world, keep and eye on China

No anti-competitive practices in discounting

There are possibilities of synergy with local stonecutters and development of a unique Greenlandic brand, for example could local tourist guides develop trips with small “trophies”

Date/time : 08. februar 2011 19:30 – 22:15

Place : Katersortarfik Qeqertarsuatsiaat

Participants : Open community meeting – 42 participants - 13 women. All ages represented, 5 elderly, 4 young persons.

Minutes by : Tanja Nielsen

1 INTRODUCTION

True North Gems invited the local people for an open meeting at the town meeting hall (Katersortarfik) in order to inform about the project and for Grontmij | Carl Bro A/S to initiate the community consultations for the scoping part of the SIA process.

2 MEETING

Morten Johnsen, the chairperson of the settlement council, bid welcome and thanked True North Gems for coming.

Tanja Nielsen, Grontmij | Carl Bro A/S, informed about the SIA process and the background for doing the SIA process; that the consultations in Qeqertarsuatsiaat were part of the scoping process.

Nick Houghton thanked in English the crowd for coming and presented himself and Jeff Giesbrecht as the CEO and the VP of operations, respectively. The project description, as is at the time being, was presented on a slide show by Nick Houghton. Tanja Nielsen acted as interpreter, started out interpreting into Greenlandic. As the crowd requested better interpreters, students; Upaluk Poppel and Pipaluk Lyngé (not certified interpreters), hired by Grontmij | Carl Bro A/S for note taking and assistance during consultations took over interpretation. As the interpretation from English to Greenlandic was too time consuming, the students were asked to run through the presentation in Greenlandic.

The community was asked whether the name of Lake Katrina is acceptable or whether there's another traditional name?

Answer (Morten Johnsen): It is important for the community and for the respect of the ancestors that the name is Greenlandic. MJ suggests Kuussuatsiaq Qaava and a discussion started about whether the name was appropriate.

Meeting/Groups	Questions and issues raised
Public meeting	<p>Why is the no interpreter if it's so important to inform about the project? Answer NH: We do believe we have good and competent translators in the students here today.</p> <p>How come plans have changed compared to the original plans and why is</p>

	<p>there no polishing locally before selling? Answer NH: it is physically impossible to do the polishing in Greenland as it takes hundreds of people to polish and the competences are not present in Greenland today.</p> <p>Why is the sorting house placed in Nuuk and not in Qeqertarsuatsiaat? Answer NH: We need an independent laboratory (where the stones will be treated with strong acids) in close connection to the sorting house. The independent laboratory is placed in Nuuk.</p> <p>How come the lab cannot be in Qeqertarsuatsiaat? Answer NH: The independent lab must have highly skilled and educated employees and have the required permits to operate. It is very dangerous to work with the strong acids. Today there's no such qualification available in Qeqertarsuatsiaat.</p> <p>How come the sorted stones that have been processed in Qeqertarsuatsiaat have been used as road material if it's that dangerous? Answer NH: The road material used had not been treated chemically – only crushed and sorted.</p> <p>How come some foreign employees at the mine site last year got a much better salary than local employees? Answer NH: I don't know what the qualifications and training the mentioned employees had. As a general rule, employees are paid according to qualification and training level.</p> <p>Will salary rise with developing skill levels? Answer NH: yes.</p> <p>Greenland should benefit economically from True North Gems selling rubies. If the salary is low it will be difficult to recruit local employees as the living expenses in Greenland and Qeqertarsuatsiaat are very high. Answer NH: Greenland will benefit economically by the taxes from the mining company and for selling the rubies. There will be business opportunities available for local businesses and deliverables and by direct employment.</p> <p>We have been promised that Qeqertarsuatsiaat will benefit economically and it has still not happened. Answer NH: The mine has not yet started. There will be opportunities as soon as the mine starts.</p> <p>How come so many have become millionaires from the rubies, but not people from Qeqertarsuatsiaat (it is mentioned that there have been a person showing very expensive ruby jewellery in Qeqertarsuatsiaat, and on the internet bras and G-strings have been shown as costing millions)? Answer NH: True North Gems do not have permit from the BMP to sell the rubies, but it's true that there are stones that have been polished and used for jewellery, but it has not been sold. There's no export or exploitation licence (or application for any) given as of yet.</p> <p>During the winter income is low for locals. Can TNG help with equipment and spare parts for the stone workshop so that the locals can use the existing equipment?</p> <p>What is the ownership of TNG? Can locals become shareholders? Answer NH: Yes, anyone can buy shares in TNG, TNG is listed on the stock</p>
--	--

	<p>exchange.</p> <p>How much are the collected samples worth? Answer JG: The market and the pricing is complex when it comes to rubies as it depends on the quality of the stones and the polishing. The price is very low on the existing ruby samples – approx. 5 kr.</p> <p>How come those polished rubies that were shown in 2008 were worth millions when you say a small rough ruby has a 5kr. Value? Answer JG: The value of the ruby is raised when it has been polished, refined and worked into jewellery.</p> <p>How come a ruby of 60 g had a value of 2 million \$ if you say rubies have no value? Answer NH: You may be talking about the Kitaa Ruby. This ruby was clear, has been polished and carved which raise its value considerably. Greenland will benefit economically from the sales of the rubies.</p> <p>Why only work for 3-6 months a year and how long is mine life? Answer JG: Mine life is at least 7-10 years. Being an open pit mine it can not be operated in the winter due to the weather conditions.</p>
Focus group with women	<p>One woman stated that she travels in the summer in the area. Is aware of the mining activities at Aappaluttoq and is therefore not comfortable in approaching the area. Needs more information about what activities there are in the area.</p> <p>Would like that the employment at the project would be year round instead of only during the summer.</p> <p>There are complains about the helicopter landing close to the cemetery as it was disturbing and dusty – move to Nuunnguaq Kujalleq.</p> <p>There should be more boat rides from Nuuk to Qeqertarsuatsiaat, that would be good for the community as the rides are too far apart.</p> <p>The houses in Qeqertarsuatsiaat are too old and there should be either new houses built or the old ones repaired for the ones moving to Qeqertarsuatsiaat.</p> <p>The group feels that there should be a security guard at the site during winter.</p> <p>A happy family is where the income is regular (can be just one income). No alcohol is safe. In Qeqertarsuatsiaat the men aren't violent towards women.</p> <p>It does not help Qeqertarsuatsiaat if TNG doesn't buy goods in Qeqertarsuatsiaat. Even little help has big effect in the little community. Fx there is no sports centre.</p> <p>Give information directly to the community or take to site in order to show plans.</p>
Focus groups with fishermen and hunters	<p>The fishermen/hunters have noticed that there are about three barrels of fuel for the helicopter that may have been dropped or lost by the activities at the mine site. The fishermen/hunters recommend that they are contacted if that happens again so they can transport these safely. It is in common interest that the environment is kept clean.</p> <p>The gate area to Tasiarsarsuaq needs to be smaller or equal to a 42 foot boat as the currents and tidal conditions as well as the narrow passage makes it</p>

	<p>impossible to enter when bigger. The mining company should do some mooring and measurements at the gates to make sure it is safe to enter the area.</p> <p>The fishermen/hunters use Tasiusaa area as an escape area when the wind from south east gets too fierce in Tasiusarsuaq, but they have been reluctant to enter the gate as they don't want to disturb the mining activities. They would like to have an agreement with the mining company to be able to enter the area in these circumstances - also during the caribou hunting season as the stream on the north side of Tasiusaa is a good char area. One hunter told about of an incidence on September 16, 2010 when he had tried to camp close to the mining camp, but didn't feel welcome and so quickly left the area. The fishermen/hunters would like an easy communication with the mining company or a representative to contact in these situations mentioned.</p> <p>The fishermen/hunters are worried that there will be areas (outside the project area) they cannot use if there are more exploration done in the area. They believe the hunting and the mining activities is able to coexist if the communication and cooperation is done openly.</p> <p>The fishermen/hunters are mostly busy and earn the most during summer and they are worried to loose their hunting license if they should take jobs at the mine site. They are only allowed to earn 50% of their earnings as hunters/fishermen on the side or they lose their license.</p>
Municipal workers	<p>There is a need for better control of the rubies.</p> <p>It is believed that the harbour in Qeqertarsuatsiaat is too small for the freight boats.</p> <p>It is important that Kommuneqarfik should be informed about the activities in the area for Naalakkersuisoqarfik.</p> <p>Qeqertarsuatsiaat needs electricity. There could be installed a hydropower plant across the site at the arctic char stream that could be used.</p> <p>There should be control of who comes in and out of Qeqertarsuatsiaat and who will be employed at the site.</p> <p>Would like to have unemployed working at the site (they have capacity)</p> <p>Would like to see locals being trained for work at the site.</p> <p>Young people are restless and have no activities in Qeqertarsuatsiaat.</p> <p>People moved out of Qeqertarsuatsiaat because of not enough employment opportunities and wages. Believe that Qeqertarsuatsiaat will grow because of the mining activities.</p> <p>Houses and homes are adequate and are alike the other towns in Greenland.</p> <p>Would like the helicopter landing pad out of settlement as planned by the Municipality.</p> <p>Qeqertarsuatsiaat need more information from the BMP and the activities in the area.</p>
Local business people	<p>Concerned about the Qeqertarsuatsiaat local companies (fishery, grocery, municipality etc.) will not have enough workers as the companies are</p>

	<p>important for the community if the project is commenced.</p> <p>The locals will want the jobs for all year round and not only for the summer months. It's unattractive for Qeqertarsuatsiaat.</p> <p>There are 8 young locals that have gone through mining school in Qeqertarsuatsiaat (all have jobs, some in Nuuk, 1 in Sisimiut, 1 in Nalunaq several in Qeqertarsuatsiaat).</p> <p>Would like that the Greenlanders own the rubies.</p> <p>Politicians do not hear what Qeqertarsuatsiaat people say or inform the locals. Ole Christiansen should tell about rubies, the market, the individual activities (sorting and lab) as they need a local Greenlander be neutral to understand the ruby situation.</p> <p>The locals are not against TNG mining for rubies.</p> <p>Would like to see that Qeqertarsuatsiaat and TNG can cooperate with electricity and fuel as the prices are sky-high.</p> <p>Is concerned as if Alcoa commences construction how it will affect the TNG project as Alcoa needs many expatriates to Greenland.</p> <p>Workers are needed for the fishing factory. If the Aappaluttoq mining starts as most of the employees may apply for the mining jobs.</p> <p>Would like to know what their plans are from the BMP and the Ministry of business:</p> <ul style="list-style-type: none"> • How the people's salaries can be secured (qulakkeerneqarsinnaava)? • Will there be safety for the TNG employees and how will they do it? • What are the consequences and danger for the locals using the chemicals? • What are the impacts and effect and will they be mitigated? • Concerned about drugs being smuggled into Qeqertarsuatsiaat by boat in the past (2003) • Is there an open agreement between the Greenland Government and TNG and is it open for public? • Will export of rubies be controlled by BMP • What will there be done to prevent ruby smuggling and drugs amongst employees? • How can TNG affect the locals and what are the agreements? <p>It is important to the locals in the small community that it is informed and will be heard about the TNG plans and possibilities from the Greenland self-government</p>
Worker at the elderly house	<p>The helicopter landing in between the resident areas in Qeqertarsuatsiaat as it was disturbing the elder's home and the kindergarten. She wants the TNG to consider building a helipad at Nuunnguaq Kujalleq as it is away from houses and will not disturb. This would benefit fishermen and hunters to send their caribou meat and fish to Nuuk.</p> <p>Qeqertarsuatsiaat is able to use recyclable material after exploration season.</p> <p>Qeqertarsuatsiaat is not informed about ruby mining/exploration activities in the area. The area is about 1 sq km close to Qeqertarsuatsiaat.</p>

	<p>Locals in Qeqertarsuatsiaat are not part of the decision process for licensing. Suggests to be informed and that there are clearer guidelines. BMP has never been in Qeqertarsuatsiaat to inform the locals.</p> <p>Would like the young people to be trained in using rubies for jewellery and the polishing.</p> <p>Would like the tailings and waste rock to be used in Qeqertarsuatsiaat for building houses or as other material (roads) instead of depositing in lake.</p> <p>The sorting house and lab in Qeqertarsuatsiaat as the locals can be trained and is very capable.</p> <p>Some feels mislead from TNG about the low ruby pricing and market, as they get contradictory information.</p>
Users of the gem workshop	<p>Are disappointed that the BMP didn't show up at the Qeqertarsuatsiaat meeting with TNG. It is important to control the exportation.</p> <p>Aqqalukasik Kanuthsen has been consulting with the local hunters and fishermen in order to map the exploration and mining activities affecting the hunters' activities.</p> <p>Doesn't believe that big vessels can enter the fjord as the passages are very narrow and flux is very strong.</p> <p>Would like more information about the ruby pricing and market situation. Neutral information may heighten the trust to TNG.</p> <p>Would like to seek job if the mining starts.</p> <p>It is important for the locals to get information about activities beforehand and to be aware about findings of ruby as they could be attacked by outsiders.</p> <p>There should be more cooperation about the naming of the project and lake as the area is part of Greenland.</p> <p>It's important to be told of all activities in the mining area. Fx was not informed about the Museum was doing any studying in the area.</p> <p>If the locals are being shown the polishing, aciding and faceting for themselves it would be easier to understand why it cannot be done in Qeqertarsuatsiaat.</p> <p>They need a faceting machine at the workshop. TNG has donated 2 but some parts and machines have been robbed.</p> <p>There are some courses in Denmark (Kolding) that are very interesting but we can not afford to participate. Can similar the courses being organised here?</p>
Other issues and comments raised	<p>A certified Greenlandic translation is required for the public meetings</p> <p>The fishermen/hunters discussed the naming of the "Katrina" as there is no traditional name for the lake. The Kuussuatsiaq Qaava was not correct, as Kuussuatsiaq is located farther to the south west. They believed Ukkaata Qaava is a better name as the area is referred to as the top of the side facing the sea (front to the sea).</p>
